

Projeto_TS23 - Part 1: Build it

Application Architecture

António Silvestre - 54428

Francisco Amaro - 54440

Rodrigo Branco - 54457

Running Instructions

To run a Java program we used jar files. The jar files are in the Executables folder.

Run Bank:

```
$ java -jar Bank.jar [-s <auth_file>] [-p <port>]
```

Run Store:

```
$ java -jar Store.jar [-s <auth_file>] [-p <port>]
```

Run MBeC:

```
$ java -jar MBeC.jar [-s <auth-file>] [-i <ip-bank-address>] [-p <bk-port>] [-u  
<user-file>] -a <account> <command>
```

Both Bank and Store can be runned without arguments. MBeC must have at least a command and an account number so that it can work properly.

MBeC example commands:

```
$ -s bank.auth -u 55555.user -a 55555 -n 1000.00  
$ -s bank.auth -u 55555.user -a 55555 -d 2500.00  
$ -s bank.auth -u 55555.user -a 55555 -g  
$ -s bank.auth -u 55555.user -a 55555 -c 50  
$ -s bank.auth -u 55555.user -a 55555 -v 55555_0.card -m 40  
$ -s bank.auth -u 55555.user -a 55555 -g
```
